Prepare contracts for internal as well as external signature requests. Pre-define signature positions and form fields.

With just one click, you can check the validity of set signatures directly in your documents. sproof sign specializes in the highest standards.

IT'S TIME TO SIGN.

Personnel expenses & waiting times

Obtaining and issuing signatures analogously requires a lot of preparation time, very long approval processes and dispensable deadlines.

Resource & Environmental Impact

Analog signature processes waste, often unnoticed, high personnel, printing, paper, shipping and archiving costs.

It's the standard that counts. Learn more about the digital signature.

There are three digital signature standards. The simple, the advanced and the qualified electronic signature. More and more large and small companies, law firms, practices, managing directors, data protection officers and IT admins are relying on qualified electronic signatures, as this is the only way to sign digitally that is legally equivalent to handwritten signatures throughout Europe. This highest signature standard, coupled with uncompromising data protection, is the absolute basis for European platforms like sproof sign, unlike most of the competition.

High evidential value

FES

**Advanced
electronic
signature**

For documents without a legal requirement to be in writing - e.g. for internal processes.

Maximum evidential value

QES

**Qualified
electronic
signature**

For documents with legal writing requirements - e.g. for external collection of important signatures. The signature is 100% equivalent to the handwritten signature.

"It's all about commitment and trust in our industry. The digital signature, in the highest quality class, has now become a common form for us to make binding decisions or to obtain them digitally."

Dr. Christian Zwick,
Lawyer, Binder Grösswang

The digital signature has come to stay.

For almost all industries & companies, our platform for issuing and obtaining legally valid signatures means measurable added value.
